Table 1. b) Geochemical data for the sampled rocks. % = weight percent; PPM = part per million; LOI = loss on ignition; d.l. = detection limit; SUM REE = sum of rare earth elements; CIA = chemical index of alteration; TOT/C = total carbon; TOT/S = total sulfur; CeN = normalized Cerium anomaly and EuN normalized Europium anomaly, calculated after Taylor and McLennan (1985); 'N' denotes chondritic normalization after Taylor and McLennan (1985); N.A. for CIA* (re-calculates the CIA under the assumption to use the value of TOT/C and P₂O₅ to estimate the amount of calcite and phosphates to reduce the CaO value for calculations) indicates the existence of C-rich phases far above the CaO which cause not interpretable values (after Fedo et al., 1995); Σ = SUM; Fm = Formation.
